## Anejo I

### Relaciones adimensionales para sección rectangular

En este Anejo se desarrollan expresiones de  $Wd/I$  y  $W/bd^2$  en función de  $d/h$  y  $n\rho$ , para sección rectangular, según se ha indicado en el Capítulo 4.

$$n = \frac{E_s}{E_c}$$

#### Sección no fisurada (Estado I)

$$x = \frac{b \frac{h^2}{2} + (n-1)A_s d}{bh + (n-1)A_s} \Rightarrow \frac{x}{d} = \frac{\left(\frac{h}{d}\right)^2 + 2(n-1)\rho}{2\left(\frac{h}{d}\right) + 2(n-1)\rho} \quad (\text{A1.1})$$

despreciando el valor 1 frente a  $n$ , se obtiene

$$\frac{x}{d} \approx \frac{\left(\frac{h}{d}\right)^2 + 2n\rho}{2\left(\frac{h}{d}\right) + 2n\rho} \quad (\text{A1.2})$$

$$W = \frac{I_1}{h-x} \Rightarrow \frac{Wd}{I_1} = \frac{1}{\frac{n}{d} - \frac{x}{d}} \approx \frac{2\left(\frac{h}{d}\right) + 2n\rho}{\left(\frac{h}{d}\right)^2 - 2n\rho\left(1 - \frac{h}{d}\right)} \quad (\text{A1.3})$$

teniendo en cuenta

$$I_1 = \frac{1}{12}bh^3 + bh\left(x - \frac{h}{2}\right)^2 + (n-1)A_s(d-x)^2 \quad (\text{A1.4})$$

y despreciando el valor 1 frente a  $n$ , se obtiene

$$\frac{W}{bd^2} \approx \frac{\frac{1}{12}\left(\frac{h}{d}\right)^3 + \left(\frac{h}{d}\right)\left[\frac{x}{d} - \frac{1}{2}\left(\frac{h}{d}\right)\right]^2 + n\rho\left(1 - \frac{x}{d}\right)^2}{\frac{h}{d} - \frac{x}{d}} \quad (\text{A1.5})$$

### **Sección fisurada (Estado II<sub>0</sub>)**

$$\frac{bx^2}{2} - A_s n(d-x) = 0 \Rightarrow \frac{x}{d} = n\rho \left( -1 + \sqrt{1 + \frac{2n}{\rho}} \right) \quad (\text{A1.6})$$

$$\frac{Wd}{I_2} = d \frac{I_1}{h-x} \frac{1}{I_2} \quad (\text{A1.7})$$

teniendo en cuenta

$$I_2 = \frac{1}{3}bx^3 + nA_s(d-x)^2 \quad (\text{A1.8})$$

se obtiene

$$\frac{Wd}{I_2} = \frac{\frac{1}{12}bh^3 + bh\left(x - \frac{h}{2}\right)^2 + (n-1)A_s(d-x)}{\left[\frac{1}{3}bx^3 + nA_s(d-x)^2\right]\left(h-x\right)\frac{1}{d}} \quad (\text{A1.9})$$

despreciando el valor 1 frente a  $n$

$$\frac{Wd}{I_2} = \frac{\frac{1}{12}\left(\frac{h}{d}\right)^3 + \left(\frac{h}{d}\right)\left(\frac{x}{d} - \frac{1}{2}\frac{h}{d}\right)^2 + n\rho\left(1 - \frac{x}{d}\right)^2}{\left[\frac{1}{3}\left(\frac{x}{d}\right)^3 + n\rho\left(1 - \frac{x}{d}\right)^2\right]\left(\frac{h}{d} - \frac{x}{d}\right)} \quad (\text{A1.10})$$

## Anejo II

### Tabla de valores coeficiente $\alpha_2$

De acuerdo con lo indicado en 4.5.4, se ha generado la tabla de valores que se indica a continuación para sección rectangular en flexión simple.

$np$	$d/h$	$\alpha_2$	$np$	$d/h$	$\alpha_2$	$np$	$d/h$	$\alpha_2$
0.0170	0.98	22.50	0.0330	0.88	17.80	0.0450	0.90	14.60
0.0170	1.00	21.00	0.0330	0.90	16.90	0.0450	0.92	13.90
0.0210	0.88	26.00	0.0330	0.92	16.00	0.0450	0.94	13.30
