

List of tables

Table I.1. DNA immobilisation methods	4
Table I.2. Leader companies and systems in microarraying technology	10
Table I.3. DNA hybridisation detection techniques	15
Table II.1. Adsorption of Os redox couples on Au-SAMs	62
Table III.1. Colloidal gold suspension stability (✓), instability (✗) or intermediate stability (⊙) in salt solutions at different concentrations without and with 1% BSA after 24h	78
Table III.2. Colloidal gold suspension stability (✓), instability (✗) or intermediate stability (⊙) in buffers at different pH and concentrations without and with 10% ethanol after 24h	79
Table III.3. Colloidal gold suspension stability (✓), instability (✗) or intermediate stability (⊙) in buffers at different pH and concentrations with 85mM KCl without and with 1% BSA after 24h	79
Table III.4. Fluorescence emitted at 520nm by the supernatants from the three washings, from heating + centrifuging or only centrifuging, and from removal by mercaptoethanol	87
Table V.1. Global charges and mediator redox potentials (E_{redox} in mV vs. Ag/AgCl) for osmium mediators obtained by cyclic voltammetry	119
